Bachmann supplied Loco with V5 ESU decoder and 8 Ohm Speaker

Please be advised that SWD only supply the sound file for Bachmann to use. We have no control over the speaker choice. It is possible therefore that you could have two identical models with either an 8 Ohm or 4 Ohm speaker, depending on Bachmann stock levels. If you have low volume the chances are you have the 8 Ohm speaker. However, the volume can be increased by changing these CVs as follows:

- Step 1) CV 31 = 16
- Step 2) CV 32 = 1
- Step 3) CV 259 = a value between 129 & 255 (128 Default)
